

Professional Summary	
Full-stack engineer with 6+ years who lives in the backend but owns the full feature. Built and scaled Laravel systems serving 90K+ users, \$10M+/mo in transactions, and 5K daily file uploads — with production Angular and React frontends shipped alongside. Deep expertise in PHP, MySQL optimization, distributed queues, and payment integrations. Frontend-capable, backend-obsessed.	
Core Skills	
Backend & APIs: Laravel, PHP, CodeIgniter, REST APIs, GraphQL, WebSockets, Queues, Cron Jobs	
Databases: MySQL, PostgreSQL, MongoDB, SQLite — query optimization, indexing, schema design	
Frontend Development: React.js, Angular, Vue.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS	
Payments: Stripe, PayPal, USAePay (Card + ACH), Payroc, N-Genius	
Cloud & DevOps: AWS (EC2, S3, RDS, SQS, Lambda), Docker, Nginx, Linux, CI/CD	
Microservices & Scripts: Go, Node.js, Python	
Integrations: Twilio, Zoom SDK, Shopify API, LoRaWAN/IoT, WebSockets	
Professional Experience	
Lead Full-Stack Engineer <i>CodeTalker Innovations</i>	11/2023 – Present Daska, Pakistan
Prescription Hope (HealthTech · 90,000+ patients · \$10M+/mo) - Rebuilt the patient portal from Core PHP to Angular, delivering a fully componentized frontend with new REST API contracts — reducing average page load by 65% across 90,000+ active patients. - Integrated 3 payment gateways (USAePay Card + ACH, Payroc, Stripe) into a unified billing dashboard, supporting \$10M+ in monthly recurring transactions with zero payment processing downtime. - Developed a multi-level promotions engine covering new patient acquisition and retention campaigns, contributing to a measurable increase in patient conversion rates. - Deployed a dynamic email and SMS notification system handling 45+ template types with a self-service content layer, eliminating developer involvement for routine copy updates and saving ~8 hours/week of engineering time. - Resolved critical database bottlenecks through index restructuring, query optimization, and pagination — cutting full page load from ~2 minutes to under 2 seconds, a 98% reduction in load time. - Automated recurring billing, invoice generation, and renewal notifications across 20+ cron jobs, cutting manual billing errors by ~90%. - Migrated the full codebase from CodeIgniter 1 to CodeIgniter 3 with zero downtime, modernizing 3+ years of legacy code while maintaining uninterrupted service. Tech Stack: PHP, CodeIgniter 1/3, Angular, MySQL, AWS EC2, USAePay, Payroc, Stripe, REST APIs, Cron Jobs	
Aldawli ERP (Saudi Arabia) - Identified and neutralized a live supply-chain backdoor in a third-party Composer package — base64-encoded eval() payloads exposing terminal access, database controls, and a hidden super-user route exfiltrating server IPs — cloned and sanitized the package, validated 100% of affected modules, and restored full production operation within 30 hours. - Authored a Python service to link physical scanners and printers to a Laravel app through hardware events, automating document ingestion and print dispatch, which reduced manual handling by ~80% and tripled processing speed. - Refactored reporting modules and data retrieval workflows, improving query performance by ~40% and decreasing average report generation time from 45 seconds to under 10 seconds. - Engineered ZATCA-compliant e-invoicing integration (Phase 2), implementing QR code generation, XML validation, and automated reporting workflows to ensure full regulatory compliance in KSA. Tech Stack: Laravel, Python, MySQL, Hardware Integration (Scanner/Printer API), ZATCA Phase 2	
Kepler CRM — European Automotive Workshop CRM - Diagnosed and fixed critical performance bottlenecks in a legacy Laravel CRM, achieving a 10x reduction in API response time through targeted query optimization and schema restructuring. - Delivered an MVP module integrating the Tekmetric API across multiple workshop locations, consolidating cross-shop data into a single operational dashboard and lowering owner reporting time by ~60%. Tech Stack: Laravel, MySQL, Tekmetric API	

Senior Software Engineer

02/2021 – 11/2023 | Lahore, Pakistan

Contrive Solutions

VEVA Collect (B2B Music · ~5,000 uploads/day · files up to 10GB)

- Directed a team of 3 engineers delivering full-stack features on a high-traffic B2B platform processing **~5,000 file uploads** per day with individual **files up to 10GB**.
- Executed a **zero-downtime upgrade** from Laravel 5.8 to Laravel 10, modernizing 4+ years of production code without disrupting active users or upload workflows.
- Architected a distributed async pipeline using AWS S3, SQS, Lambda, Redis, and Go microservices — reduced large-file processing time by ~70% and eliminated upload-related timeouts.
- Introduced load balancing and connection pooling that sustained 100% uptime during peak concurrent usage periods, previously causing server strain.
- API-driven React interfaces for long-running background operations, lowered perceived wait time by ~80% through real-time progress indicators.

Tech Stack: Laravel, Go, React.js, Vue.js, MySQL (RDS), Redis, AWS S3/SQS/Lambda, GraphQL, WebSockets, MJML

Step2Compliance — Air Compliance Management PWA

- Fixed a platform-blocking infrastructure constraint by provisioning a Windows EC2 instance to generate .xlsm macro-enabled Excel files in a Linux environment — a problem no native Linux tooling could address.
- Configured an end-to-end async pipeline: Laravel dispatched encrypted JSON payloads to a Python automation service, files were stored in S3, and webhooks triggered user notification — eliminating all UI blocking and cutting the file delivery time by ~65%.
- Extended Vue.js frontend components and Laravel backend modules to meet 6+ evolving EPA compliance requirements over a 12-month engagement.

Tech Stack: Laravel, Vue.js, Python, AWS EC2 (Windows + Linux), S3, Webhooks, MySQL

RadioBridge (IoT/LoRaWAN)

- Constructed backend services and analytics dashboards to ingest, process, and visualize real-time sensor data from LoRaWAN IoT devices across multiple deployment sites.
- Established alert generation and reporting pipelines connecting physical sensors to the Laravel layer, achieving alert response times of under 30 seconds.
- Coordinated with frontend teams to ship actionable analytics interfaces, accelerating client decision-making by surfacing live device health data in real time.

Tech Stack: Laravel, MySQL, REST APIs, IoT/LoRaWAN

Software Engineer

01/2020 – 02/2021 | Lahore, Pakistan

DigiLynx

- Crafted 5 backend modules and REST APIs for CondoBridge, a Laravel and Vue property management platform, supporting 5,000+ monthly transactions through Stripe and PayPal integrations.
- Launched a Shopify app enabling appointment scheduling, class booking, and payment processing — integrated with Twilio SMS for reminders, lowering no-show rates by ~30%.

Tech Stack: Laravel, Vue.js, Stripe, PayPal, MySQL, Twilio, Shopify API

Laravel Developer

09/2019 – 10/2020 | Lahore, Pakistan

Genetic Concepts

- Mentored 2 junior developers and led sprint planning and architecture reviews across 3+ concurrent client platforms.
- Released MilkyWay — a multi-tenant IoT SaaS aggregating sensor data from milking machines across multiple farms, with health alerts and performance reporting.
- Created Landlord Certs UK from scratch — a property compliance platform covering energy certifications, safety scheduling, and renewal tracking for UK landlords.
- Upgraded and maintained a multi-role School ERP serving 6 user types (Admin, Staff, Teachers, Students, Parents, Hostel, Transport), improving ERP response time to under 20 seconds and onboarding 3+ institutional clients.

Tech Stack: Laravel, MySQL, Blade, Twilio, JS

Education

Bachelor of Software Engineering

2015 – 2019 | Gujrat, Pakistan

University of Gujrat (UOG)
