Education
Bachelor of Software Engineering <i>University of Gujrat</i> 🔗 2015 – 2019 <i>Gujrat, Pakistan</i> CGPA 3.15/4.00
Core Skills
Backend & APIs Laravel (6+ years), PHP, REST APIs, GraphQL, API authentication, webhooks, cron jobs, queues, background jobs
Databases MySQL, PostgreSQL, MongoDB (optimized schemas, indexing, views for scale)
Payments Stripe, PayPal, N-Genius, USAePay, Payroc
Cloud & DevOps AWS (S3, EC2, RDS, SQS, Lambda), Docker, Nginx, Linux
Microservices & Scripts Go (workers/microservices), Node.js, Python
Frontend (Working Knowledge) Blade, Bootstrap, Vue.js, React.js, Angular, MJML
Other Scalability, system reliability, workflow automation, production stability

Professional Summary
Senior Backend Engineer with 6+ years of experience, including 2+ years in full-time freelance roles, specializing in payment-driven, scalable backend systems, APIs, and multi-tenant SaaS platforms . Expert in Laravel, PHP, MySQL, AWS, and Go microservices , with proven experience building high-scale, mission-critical systems handling thousands of users and millions in transactions. Strong track record in ownership, team leadership, and backend architecture , delivering reliable, high-performance platforms for international clients and remote-first teams.
Professional Experience
Senior Software Engineer (Freelance / Remote) <i>CodeTalker Innovations (11/2023 – Present)</i> Prescription Hope — Senior Backend Engineer (PHP / Laravel / CodeIgniter / AWS) <i>Healthcare medication assistance platform serving 90,000+ patients</i> - Led backend development across two interconnected platforms: - RXI – internal employee operations portal - Manage – patient & broker-facing platform - Built and maintained backend systems supporting 90,000+ patients and \$10M+ in monthly recurring payments - Designed and implemented payment infrastructure integrating USAePay, Payroc, and Stripe, ensuring reliable recurring billing and transaction processing - Owned core business workflows, including patient application flows, promotions, affiliate structures, and automated email delivery systems - Designed and optimized scalable database architecture (indexed schemas, optimized queries, database views) to support high-volume transactional workloads - Developed and secured REST APIs with custom authentication mechanisms powering Angular and internal systems - Implemented and maintained 20+ cron jobs for billing, renewals, notifications, and operational automation - Supported a healthcare platform responsible for \$337M+ in patient savings, where backend downtime would directly impact medication access for thousands of users Tech: PHP (Laravel, CodeIgniter), MySQL, Angular, Payment Gateways, Cron Jobs, REST APIs, AWS
Senior Software Engineer <i>Contrive Solutions (02/2021 - 11/2023)</i> Veva Collect — Senior Backend Engineer (Laravel / AWS) <i>B2B music collaboration platform used by major labels and Grammy-winning producers</i> - Owned and led backend development for a high-traffic collaboration platform handling ~5,000 file uploads/day, with individual files up to 10GB and aggregate shares exceeding 25GB per session - Designed and implemented a distributed file-processing pipeline using AWS S3, SQS, Lambda, Redis, and Go microservices to support large multi-file uploads without degrading UX - Built an async ZIP creation system (SQS + Lambda + Go workers) to safely bundle large assets, preventing request timeouts and frontend blocking - Scaled backend to handle heavy concurrent collaboration traffic by introducing AWS load balancing, preventing production outages under peak load - Implemented secure APIs and GraphQL endpoints powering real-time collaboration and file sharing for thousands of paying clients - Took full ownership of backend architecture, deployment, and production stability while collaborating with frontend and QA teams Tech: Laravel, Go, MySQL (RDS), Redis, S3, SQS, Lambda, GraphQL, AWS
